

# GeoLearn — Mobile UI/UX Design Case Study

## Final UI/UX Design Assignment

Prepared for: TuteDude Final UI/UX Design Case Study

Prepared by: Saurav Mitra

Platform: Mobile Application

Category: EdTech / Skill Discovery & Learning Platform

---

## 1. Project Overview

### Project Title

**GeoLearn — Skill Discovery & Learning Platform for GIS, Remote Sensing & Data Analytics**

### Problem Statement

Students and early professionals often struggle to discover relevant skill-based courses, organize their learning journey, and stay motivated during self-learning. Most platforms overload users with too many options and lack structured mentorship and progress tracking.

GeoLearn solves this by offering:

- Personalized course recommendations
  - Structured learning dashboards
  - Progress tracking
  - Mentor support
  - Community learning
  - Career-focused learning paths
- 

## 2. Project Goals

The primary goals of GeoLearn are:

1. Help users discover relevant skill-based courses quickly.
  2. Improve user engagement with progress tracking.
  3. Reduce confusion in course selection.
  4. Provide mentorship and community interaction.
  5. Create a clean and accessible mobile-first learning experience.
-

## 3. Target Audience

### Primary Users

#### College Students

- Age: 18–25
- Looking for career-oriented courses
- Interested in GIS, Remote Sensing, Data Analytics, and Tech skills

#### Job Seekers

- Want industry-ready certifications
- Need structured learning paths
- Require mentorship support

#### Working Professionals

- Want to upskill quickly
  - Need flexible learning experiences
- 

## 4. User Research

### Research Findings

After studying online learning behaviors and student pain points, the following problems were identified:

| Problem                | Impact                        |
|------------------------|-------------------------------|
| Too many courses       | Users feel overwhelmed        |
| Lack of guidance       | Users stop learning midway    |
| No motivation tracking | Low completion rates          |
| Poor navigation        | Difficult learning experience |
| Weak community support | Isolation during learning     |

---

## 5. User Persona

### Persona 1

#### Name

Aman Roy

#### Age

21

#### Occupation

Geography Student

#### Goals

- Learn GIS and Remote Sensing
- Prepare for internships
- Build technical skills

#### Frustrations

- Cannot choose the right course
- Too many scattered resources
- No mentorship support

#### Needs

- Structured learning
  - Simple UI
  - Progress tracking
  - Mentor guidance
- 

## 6. Information Architecture

### App Structure

## 7. Design System

### Color Palette

| Color            | Hex Code | Usage                |
|------------------|----------|----------------------|
| Primary Purple   | #6C63FF  | Buttons & Highlights |
| Dark Text        | #222222  | Main Text            |
| Secondary Text   | #666666  | Sub Text             |
| Light Background | #F7F8FC  | Background           |
| White            | #FFFFFF  | Cards                |
| Success Green    | #4CAF50  | Progress Indicators  |

---

### Typography

#### Font Family

Poppins

#### Font Hierarchy

| Element   | Size | Weight   |
|-----------|------|----------|
| Heading 1 | 28px | Bold     |
| Heading 2 | 22px | SemiBold |
| Body Text | 16px | Regular  |
| Caption   | 13px | Medium   |

---

## UI Components

### Buttons

- Rounded corners (14px)
- Filled primary CTA
- Soft shadow

### Cards

- Course cards with thumbnail
- Mentor cards
- Progress cards

### Navigation

- Bottom navigation bar
  - Simple icon-first navigation
- 

## 8. Wireframe Concepts

### Screen 1 — Splash Screen

#### Elements

- App logo
- App name
- Tagline
- Get Started button

#### UX Goal

Creates a clean first impression and introduces branding.

---

### Screen 2 — Login / Signup

#### Elements

- Email field
- Password field
- Social login buttons
- Continue CTA

## UX Goal

Reduce onboarding friction with minimal fields.

---

## Screen 3 — Interest Selection

### Elements

- Skill categories
- Selectable tags
- Continue button

## UX Goal

Personalize user experience from the beginning.

Suggested Interests:

- GIS
  - Remote Sensing
  - Data Analytics
  - Python
  - UI/UX
  - Cloud Computing
- 

## Screen 4 — Home Dashboard

### Elements

- Search bar
- Recommended courses
- Continue learning section
- Mentor recommendations
- Progress tracker

## UX Goal

Allow users to continue learning quickly.

---

## Screen 5 — Course Discovery

### Elements

- Filters
- Category tabs
- Popular courses
- Ratings
- Course thumbnails

### UX Goal

Help users discover courses efficiently.

---

## Screen 6 — Course Detail

### Elements

- Course preview image
- Course description
- Mentor profile
- Enroll button
- Syllabus
- Reviews

### UX Goal

Provide all decision-making information clearly.

---

## Screen 7 — Progress Tracker

### Elements

- Completion percentage
- Weekly learning chart
- Certificates
- Streak counter

### UX Goal

Increase motivation and retention.

---

## Screen 8 — Mentor & Community

### Elements

- Chat section
- Mentor cards
- Community discussions
- Q&A threads

### UX Goal

Encourage collaborative learning.

---

## 9. UX Decisions & Design Thinking

### Why Purple?

Purple creates a modern, creative, and tech-friendly learning atmosphere.

### Why Card-Based Layout?

Cards improve content scanning and reduce cognitive overload.

### Why Bottom Navigation?

Bottom navigation improves accessibility for mobile users.

### Why Progress Tracking?

Gamification and visual progress improve learning consistency.

### Why Personalized Interests?

Users discover relevant content faster and feel more connected.

---

## 10. Accessibility Considerations

The app was designed with accessibility principles:

- High color contrast
- Large touch targets

- Readable typography
  - Consistent navigation
  - Simple layouts
  - Minimal clutter
- 

## 11. Prototype Flow

### Clickable Prototype Navigation

#### Flow 1 — Onboarding

Splash → Login → Interest Selection → Home

#### Flow 2 — Course Discovery

Home → Search → Course Detail → Enroll

#### Flow 3 — Progress Tracking

Home → Progress → Certificate

#### Flow 4 — Community

Home → Mentor Community → Chat

---

## 12. Figma Prototype Instructions

### Recommended Frame Size

390 × 844 px (iPhone 13)

### Auto Layout

Use auto-layout for:

- Cards
- Navigation
- Buttons
- Lists

## Components to Create

- Button component
- Course card component
- Mentor card component
- Navigation bar component

## Prototype Interactions

| Action        | Interaction        |
|---------------|--------------------|
| Get Started   | Navigate to Login  |
| Login         | Navigate to Home   |
| Tap Course    | Open Course Detail |
| Enroll Button | Success Animation  |
| Mentor Card   | Open Chat          |

---

## 13. Suggested Assets

### Icons

- Material Icons
- Feather Icons
- Phosphor Icons

### Images

Use:

- Unsplash
- Freepik
- Storyset illustrations

---

## 14. High-Fidelity UI Screen Descriptions

### Splash Screen

- Minimal centered logo
- Purple gradient background

- Clean typography

## Login Screen

- White card layout
- Soft shadows
- Social login buttons

## Home Dashboard

- Personalized greeting
- Recommended courses carousel
- Continue learning cards
- Progress section

## Course Discovery

- Search functionality
- Filters
- Scrollable categories

## Course Detail

- Hero image
- Mentor information
- Course syllabus accordion
- Reviews and ratings

## Progress Screen

- Circular progress indicator
- Completion graph
- Certificates section

## Mentor Community

- Chat previews
  - Community discussion cards
  - Mentor recommendations
-

## 15. Evaluation Criteria Alignment

| Evaluation Criteria | How GeoLearn Solves It                     |
|---------------------|--------------------------------------------|
| Creativity          | Niche learning platform for GeoTech skills |
| UX Thinking         | Structured and simplified navigation       |
| UI Consistency      | Consistent colors, spacing, typography     |
| Accessibility       | Mobile-first readable layouts              |
| Visual Hierarchy    | Card-based modular design                  |
| Problem Solving     | Personalized course discovery              |
| Prototype Quality   | Smooth clickable navigation                |

---

## 16. Final Conclusion

GeoLearn is a mobile-first learning platform focused on helping students and professionals discover relevant skill-based courses while staying motivated through mentorship, progress tracking, and community engagement.

The project demonstrates:

- User-centered design thinking
- Mobile UI consistency
- UX problem-solving
- Visual hierarchy
- Interactive prototype planning

This design aims to create a modern and accessible digital learning experience.

---

## 17. Submission Checklist

### Figma File

Include:

- Design system
- Wireframes
- High-fidelity screens
- Clickable prototype

## PDF Case Study

Include:

- Research
- Personas
- Wireframes
- Final UI
- UX explanations

## ZIP File

Include:

- PDF
  - Screenshots
  - Assets
  - Prototype link
- 

# 18. Suggested Figma Page Structure

### Page 1

Research & Moodboard

### Page 2

Wireframes

### Page 3

Design System

### Page 4

High-Fidelity UI

### Page 5

Prototype

---

## 19. Suggested Prototype Animations

- Smart Animate
  - Slide transitions
  - Button micro-interactions
  - Loading progress animation
- 

## 20. Final Deliverables

Deliverables prepared:

- ✓ Problem Statement
- ✓ User Research
- ✓ User Persona
- ✓ Information Architecture
- ✓ Design System
- ✓ Wireframe Plan
- ✓ UI Screen Descriptions
- ✓ UX Decisions
- ✓ Prototype Flow
- ✓ Accessibility Notes
- ✓ Submission Structure
